Inspection Memo
to Coal File

RE: Blazon Company
Exploration Sites B-1 and B-2
CEP/007/009
Carbon County, Utah

Inspections of the above mentioned exploration sites were conducted by Sandy Pruitt on November 17, 1982, with John Eniss and on November 18, 1982 with Steve Angell and Brett Sanders, all of Sanders Exploration Company. The purpose of the inspection was to verify a November 15, 1982 phone conversation with Bill Green, Sanders Exploration notifying this inspector that the drillers were unable to find the drill holes B-1 and B-2. The drilling road and pads were plowed on Friday, November 12, 1982, and the drill holes (which had not been marked previously) were covered. By this inspection the approximate location of the drill holes was determined but the soil covering the holes was frozen. Due to the snow and frozen soil conditions an extension past the ninety (90) day abatement time for NOV #2 of 2, (N82-2-8-2), is justified. The abatement deadline is extended until April 30, 1983 at which time a reassessment of onsite conditions will be made to determine if compliance can be achieved with a reasonable abatement. NOV #1 of 2, has also been extended until April 30, 1983, since the required recontour work cannot be done adequately due to frozen soil conditions present on site. Allen Smith, North American Equities was notified of the modification in a letter dated November 26, 1982.
